

Pseudocode and Flowchart for basic input program

Import input libraries if needed

Begin function{

 Declare string variable for user's name;

 Declare integer variable for user's grade;

 Prompt user to input their name with a printed statement;

 Read in the user's input and assign their name to the variable set earlier;

 Prompt user to input their grade with a printed statement;

 Read in the user's input and assign their grade to the variable set earlier;

 (Begin conditional statement)

 If (user's grade is 75 or higher)

 Print "That's GREAT!";

 Or else if the user's grade is below 75

 Print "That's unfortunate...";

 (End conditional statement)

}End Function
